275 Coleman, previously called “11 Innes” and “Block 56”, is planned to take full advantage of the 0.45 acre site’s space and view of the bay to the southeast. Fitting in a mixture of 1, 2, 3, 4 and 5-bedroom units into the site ensures that household of all sized can be accommodated, several of which have recessed street level entries. A mid-block break along Coleman Street functions as the site’s main entry while also allowing for vertical circulation and physical and visual connection between the courtyard and Coleman Street. The entry stair at Coleman is highlighted with a four story art glass wall to promote its use. A local artist’s painting was digitally transferred to the glass panels. The central courtyard is designed with a multi-purpose area, raised planter beds, tables and benches provide outdoor activities, while also allowing residents to take in the site’s views. Off of the courtyard is a community room with views to the southeast. Other services included in the building’s plan are a Flex Space, bike storage, fitness room, and 42 spaces of garage parking.

Our goal is one of true connection-joining residents together in community both within the development and among the surrounding neighborhood, with special attention to family healthy and wellness.

### Design Features

- Entry stoops for units at ground level
- Four and five stories above grade
- Main entry located at mid-block break
- Southeast facing common courtyard
- Recessed entry for units at ground level
- Garage parking

### Green Features

- All-Electric building
- Pursuing GPR Platinum Certification
- Solar PV
- Raised planter beds
- Bike storage
